Professional Summary

Computer Science student at Zewail City with hands on experience building full stack web applications using React, Next.js, Node.js, and Express. Experienced in designing REST APIs, authentication systems, real time applications, and containerized deployments. Seeking software engineering and full stack development internship opportunities.

Technical Skills

Web: React, Next.js, Express.js, HTML5, TailwindCSS, Bootstrap, TypeScript
Databases: MongoDB, MYSQL, PostgreSQL
DevOps & Infra: Docker, Nginx, Redis, Kafka, Kong, Prometheus, Grafana, OpenSearch
Tools: Git, GitHub, Postman, Swagger, Socket.io, Stripe, MinIO, Firebase, Twilio
Concepts: REST APIs, JWT, OAuth2, RBAC, Real-Time Systems, Microservices, CI/CD, SDLC

Education

Zewail City of Science and Technology — Cairo, Egypt
Bachelor of Science in Computer Science
Specialization: Software Development & Application Development
Expected Graduation: 2027

Projects

ClipSphere — Short Video Social Platform

GitHub: https://github.com/naadaaa/ClipSphere

Tech: Next.js, Express.js, MongoDB, Socket.io, Stripe, Docker

- Built a TikTok-style full-stack video platform with authentication, content moderation, and creator monetization features.
- Developed secure REST APIs using JWT authentication and role-based access control (RBAC).
- Implemented real-time notifications for likes, follows, and tips using Socket.io.
- Integrated Stripe payments and a video storage pipeline using MinIO and FFmpeg, then containerized the application with Docker.

Ghost Protocol — Ephemeral Messaging Platform

GitHub: https://github.com/naadaaa/ghost-protocol

Tech: Next.js, Express.js, MongoDB, Redis, Firebase, Socket.io, Twilio

- Built a privacy-focused messaging platform with self-destructing messages powered by Redis TTL.
- Implemented Google OAuth authentication and JWT verification using Firebase Admin SDK.
- Developed multi-factor authentication (MFA) using Twilio Verify and Redis-backed OTP sessions.
- Designed real-time user presence tracking and message delivery using Socket.io.

Verbalyn — Real-Time Chat Platform

Github: https://github.com/naadaaa/Verbalyn

Tech: Node.js, React, MongoDB, Redis, Kafka, Kong, Docker

- Built a microservices-based chat platform with 5 independent services behind a Kong API Gateway.
- Implemented OAuth2 and JWT authentication with Redis session caching.
- Designed monitoring and logging infrastructure using Prometheus, Grafana, and OpenSearch.
- Enabled asynchronous communication between services using Kafka event streams.
- Developed CI/CD pipelines and automated testing with 73%+ coverage.

FlightDock — Flight Booking System

GitHub: https://github.com/nadaaZC/FlightDock

Tech: React, Node.js, Express.js, MongoDB, JWT

- Built a full-stack flight booking platform with user authentication and reservation management.
- Implemented JWT authentication, secure password hashing, and email verification workflows.
- Developed RESTful APIs for flight search, booking creation, and reservation history.
- Designed booking validation logic to ensure seat availability before confirming reservations.

Certification

Introduction to Software Development — Coursera (Amazon)
https://coursera.org/share/a6faaec497382ccc6fb80c8956f6a50c
